

Jim prog update

In preparation for high noon this Sunday (Happy Mother's Day), I've decided to keep this blog pretty short.

Literally me if u care...

About 2 months ago I reviewed The Muscle Ladder and I thought it'd be fun to give an update of how that's been going. For full transparency I only started going back to the gym in April due to a variety of reasons (the main one being a toe 🦶 injury). So keep that in mind when I talk about my current routine.

So I decided to go Push-Pull-Legs for a few reasons:

1. I'm only in office 3 days a week which means the company gym is also only easily available 3 days a week
2. I've been avoiding legs for years now but after some insightful critical self-reflection I have discovered the glory of a well trained set of legs
3. Only doing Push and Pull days can get boring so I can have a Leg day that can be substituted for an accessory day

With the routine quickly established we can go over the actual lifts:

Push

- **Bench Press**
- Tricep Pushdowns
- Specialized Tricep movement: https://www.youtube.com/watch?v=qy2_kYtuwSY
- Cable Pec Flies
- **Shoulder Press**

Pull

- **High Mountain Row**
- Preture Curls
- **Close Grip Lat Pulldowns**
- Rear Shoulder Cable Flies

Legs

- **Leg Press**
- Leg Curls
- Leg Extensions
- Monster crawl (for side muscles)
- Calf raises

Now here are some fun facts:

- I've moved from 8 reps per set to 5 reps per set so I can keep workouts a little bit shorter
- I don't really like doing deadlifts or squats even though they would be ideal for the 1 big compound movement + isolated movement workouts I'd like to do
- I can max out the cable machine when doing Tricep Pushdowns (170lbs) so I think going forward I'll have to do a one-handed variation

Next steps:

- I want to try adding dips to push and traditional lat pulldowns for pull
- Might take a look at fitness channels and see if any movements stand out to me
- Hopefully with more than 3 weeks of data I'll be able to have a more interesting post on the progress I've made
